

Claims

1. A fractured clavicle fixing band comprising:
 - a back rest rendered in contact with a back of a user along a backbone when wore;
 - a pair of shoulder belts connected to an end portion of the back rest, stretched as respectively passed from shoulders via axillae when wore; and
 - a chest front belt for pulling and fastening, in front of a chest of the user, the pair of the shoulder belts in a direction to narrow a distance therebetween, wherein the front chest belt is made of a non-expandable material.
2. The fractured clavicle fixing band according to claim 1, further comprising a back-rest pad equipped to the back rest, wherein the back-rest pad has one main surface located at a side in contact with the back of the user forming a curved surface, and has a prescribed height enough to render the user threw out his chest.
3. The fractured clavicle fixing band according to claim 2, wherein the back-rest pad is detachably attached to the back rest.
4. The fractured clavicle fixing band according to claim 1, wherein the back rest has a length from a position slightly below a neck to an approximately center portion of the back of the user when wore, and wherein a fixing belt stretched as passed along a body of the user, for fixing and supporting the back rest, is formed to an end portion at the waist portion of the back rest.
5. A fractured clavicle fixing band comprising:
 - a back rest rendered in contact with a back of a user along a backbone when used;
 - a pair of shoulder belts connected an end portion of the back rest, stretched as passed from a shoulder to an axilla when used; and
 - a back-rest pad equipped to the back rest, wherein the back-rest pad has one main surface at a side in contact with the back of the user, set to a curved surface, and has a prescribed height enough to render the user threw out his chest.
